Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2 and 5-11 are rejected under 35 U.S.C. 102(are) as being anticipated by the Patent Abstracts of Japan publication no. 59007715. The publication discloses a valve rotating device comprising a base body (5), a cover (8) and a rotational device rotating the base body (5) relative to the cover (8), the rotational device having a freewheel connected to the base body, see Figures 1-7.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over the Patent Abstracts of Japan publication no. 59007715 in view of Wendel et al (U.S. Patent No. 4,424,773). The rotating device of the '715 publication lacks having a pin arranged on one side of the freewheel and engaged in a groove extending obliquely to the axis of rotation on the cover. The patent to Wendel et al teaches the above

exception in providing a rotating member with a pin arranged on one side of a freewheel and engaged in a groove, col. 4, lines 4-23. In view of the teaching of Wendel et al, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify the rotating device of the '715 publication to include a pin engaged in a groove extending obliquely to the axis of rotation on the cover so that a wiping action is provided in the valve which keeps the valve seat clean and ensures a good fit between the valve and its seat.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
